

TASK 2

Simple Auth System

Task Level	Deadline
simple	05/13/2024 11:00 PM

In this task we need to implement a simple auth system. Specifically signing, login, logout, and refresh token operations using sanctum package.

Requirements:

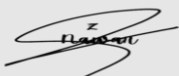

1. Use Postman, Mailtrap, and sanctum package.
2. Signup page fields: email, phone number, username, profile photo, certificate "pdf file", password and password confirmation. The user needs to verify his email with verification code (6 digits, contain numbers and letters, valid for 3 minutes).
3. Use events and listeners for email verification.
4. Login page fields: email, phone number, password.
5. Implement Logout and refresh token operations.
6. Set access token life time 5 minutes, refresh token 10 minutes.
7. Use Filesystem storage to save uploaded files.
8. Publish your postman collection and make sure you need to save the responses.
9. Upload the project to GitHub.

Send to me zip file that contain:

1. Your project without vendor directory.
2. Txt file that contains postman collection link and GitHub repository link.

Zip file name should be like "Task_2_khaled_armit".
